Revision Code: <u>A-Z</u>		

OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Pink	10/13/96	Yes			<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: During a Forest Practices inspection, I inspected a small stream flowing between harvest units IZ-11 and IZ-14 to the large estuary. The 210 Road crosses the stream approximately 150 feet upstream of its mouth. Pink salmon carcasses were found up to the road culvert. Upstream of the road, the stream continues at a gradient passable by fish. This stream heads in some small lakes located in the vicinity of units IZ-11, IZ-12, and IZ-14. The culvert installed by ANC is substantially perched and forms a complete block to any upstream fish passage. The substantial road fill also appears to have been placed on a potential pink salmon spawning area.
